

Road and Trail

Rollin' Rocks

The mountain terrain made road building rough work. Dynamite charges were used to break up the rocks, and then CCCers with jackhammers and picks dug out the rocks loosened by the blast.

National Park Project

In 1936, the CCC boys constructed a permanent footpath across Norris Geyser Basin in Yellowstone National Park.

Facts

Built 13,100 miles of foot trails

Built 125,000 miles of roads
